Total bear cubs received in 2017 **(2 cubs)**

(May 5th, 2017: I received a Female cub weighing 6.2 lbs.) (I weighed her again May 27, 2017 weight=14lbs) (Then again prior to going into my 5 acres on: 7-1-2017 weight = 29lbs) (I recorded my extensive care and observations that I witness during this process - As I do with all the bears I receive) I have 62 pages to date: as of 12-29-2017

(May 7th, 2017: I Received a small male cub. His weight was 3.6 lbs.) (This cub passed away) I have very thorough records that I kept. This cub had underlying issues and odds are would have not survived no matter what was done. I did everything I could, but it really bothered me - because this was the 1st small cub/bottle baby I had ever lost thus far.

(5-17-2017 (4) Prior bears; that I had cared for, and observed in 2016 were released in 2017)
(Burdock - Blaze - feisty were released on: May 12, 2017 & Whirlwind was released on: May 16, 2017)
It is a sad but happy feeling. I pray they do well. I am happy that Burdock has a satellite collar

I typically do not rehab/care for, observe Lynx, but this is the 2nd one I have had over the years.
